

The Firepit Source LLC 

Firepit Vents/Intakes

Features & Benefits

- Dual function – can be intake or vent
 - Intake for wood-burning firepits: improves fire efficiency and reduces smoke by supplying fresh air from below directly to the fuel source
 - Vent for gas firepits: provides escape for combustible gases (critical for safety)
- Sized specifically for each firepit
 - Vent/intake sits slightly recessed into space of one block in a stone firepit and provides support for blocks above
- Offered in two styles:
 - Black/Galvanized
 - Fully Stainless
- No cutting or drilling required for installation
- Compact packaging thanks to nesting makes this product an easy add-on to stone firepit kits
- Zero hardware needed for assembly or installation
- Competitive pricing

Dimensions & Specifications

- Dimensions are specific to each firepit vent/intake model
- Sold in packages of 3 or 4 depending on firepit
- Airflow in square inches (in²) marked on each vent

Availability

- First size for Techo-Bloc Valencia firepits to be available by April 2023
 - We are actively working on adding models to fit other firepits. Please send requests for specific firepits to: info@thefirepitsource.com

How to Use

- For use as an intake in wood-burning firepits:
 - The number of intakes varies by firepit, but we generally recommend 2 minimum up to 4 per pit for maximum airflow
 - Intakes are best installed in the first or second course of a firepit (lowest two courses)
 - If filling a firepit with sand, the top of the sand must be below the bottom of the course where the intakes are installed
- For use as a vent in a gas firepits:
 - Always refer to local regulations and manufacturer specifications for proper ventilation of gas fire features
 - Installation of vents and gas fire features should be done by qualified professionals only
 - Which course the vents are installed in depends on if the gas application is liquid propane (LP) or natural gas (NG)

Firepit Vents/Intakes Installed in Wood-Burning Firepit
